

Our mid-sized Vacuum.

Now fitted with wide wheels as standard.

PADDOCK VAC

400 LTR or 3-4 Barrows

Our mid sized machine suits most clients with 1 to 8 horses, or up to 20 alpacas.

Built in our Australian manufacturing plant using A-grade polyethylene for durability & fitted with powder coated steel frames and wheels, our machines are built to exacting standards.

They will allow you to vacuum manure in all conditions; wet or dry, long or short grass. You can also remove wet patches in stalls and empty the water troughs!

Our vacuums dump the manure into the main body & only return air passes through our Honda 4 stroke motor. This allows you to pick up soaking wet manure with ease as nothing can stick to the fan of the motor.

Clients are also using our vacuums to pick up - leaves, hedge clippings, wood shavings, trash, broken glass, walnuts, chestnuts, macadamias, feathers, dog droppings, pig slurry, soil from newly dug fence post holes, grain from around commercial silos - the list continues to grow.

- Storage Capacity 400 Ltrs
- Length 1400mm
- Height 1000mm
- Width 850mm
- Weight 65kg
- Hose Diameter 5" (127mm)
